

MARCO ANTONIO ALBA OSORIO

Tlalpan, Ciudad de México | tony980425@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Full Stack Developer with over 4 years of experience, featuring a strong foundation in backend development (Python/Django/DRF) and frontend architectures. Proven track record participating in highly complex projects across the financial, insurance, and telecommunications sectors, specializing in process automation, legacy system integrations, financial business logic, and scalable API development. Expert at translating intricate business logic into robust technical solutions while maintaining high quality standards through rigorous testing, detailed documentation, and code reviews.

TECHNICAL SKILLS

Languages:	Python, JavaScript, SQL
Backend:	Django, Django REST Framework, Flask, FastAPI, Odoo
Frontend:	Vue 3 (Composition API), PrimeVue, Tailwind CSS, React, HTML, CSS, ApexCharts
Databases:	Oracle SQL, PostgreSQL, MySQL, SQL Server, MongoDB
DevOps & Tools:	Git, GitHub, GitHub Actions, Git Flow, Claude Code, AI Agent integration in development workflows

PROFESSIONAL EXPERIENCE

Full Stack Developer | IDS Comercial (Client: Banamex) April 2025 – Present | Mexico City (Hybrid)

Keywords: Vue 3 (Composition API), PrimeVue, Tailwind CSS, Django, Django REST Framework (DRF), Oracle SQL

- Designed and implemented the capitalization module for the internal PTS portal, introducing a change-tracking table with batch and group IDs, month-over-month delta tracking, and hash-based file idempotency.
- Developed delta monetization functionalities for external projects (NCC) using concurrency control via atomic transactions and state guards, eliminating coupled functions with hardcoded values.
- Built a true-up system for post-closing reclassification adjustments utilizing an append-only model of telescopic deltas alongside documented and validated invariants.
- Implemented an end-to-end bulk resource allocation upload system via Excel: built backend validation using Pandas and reporting with Openpyxl in Django/Oracle, and developed the Vue frontend supporting Base64 blob downloads; debugged N+1 query issues and silent exception handlers.
- Developed reusable Vue 3 components using PrimeVue (including DataTable with configurable filters) styled with Tailwind CSS and integrated into a corporate CSS variable system.

Backend Developer | HIR Seguros July 2024 – April 2025 | Mexico City, Mexico

Keywords: Python, Django, Vue.js, ApexCharts, Databases, API Development

- Designed and implemented an automated validation system for personal injury insurance claims, integrating invoice validation, cross-checking total/subtotal amounts against declarations, referral letter generation, and an independent medical fee payment module, significantly reducing response times between hospitals and analysts.
- Extended the internal system to enable external user access for hospitals, integrating a negotiation interface that minimized manual communication bottlenecks during the claims process.
- Optimized the policy emission migration process into the legacy system, resolving silent errors in incomplete records and eliminating deeply nested control structures; successfully handled portfolios of over 100,000 insured individuals including products, coverages, beneficiaries, and payment receipts per agent.

- Developed an internal team activity management tool using Django and Vue.js featuring performance metrics driven by ApexCharts for per-project and per-developer tracking without external service dependencies.
- Generated functional APIs for the quarterly REUNE regulatory declaration, designed database models, and optimized search and data manipulation queries.
- Conducted code reviews for team merge requests and managed cronjobs and environment configurations in production.

Freelance Full Stack Developer | USA Home Ownership Foundation

February 2025 – March 2025 | Remote

Keywords: Web Migration, Dashboard Development, Client Communication

- Successfully migrated a comprehensive web application from WordPress to a custom proprietary codebase, expanding the initial scope from a dashboard-only migration to a complete platform overhaul.
- Coordinated technical communication between business stakeholders and development teams to align goals and fulfill requirements for an international client.

Full Stack Developer | Tline

December 2022 – July 2024 | Mexico City, Mexico

Keywords: Odoo, Flask, CRM, AWS, API Integration, B2B Logistics

- Developed custom Odoo modules for the sales panel (including input range types, numeric controls, and pop-ups with shopping cart logic) and modified the back office for subscription, purchase, total, and billing management.
- Built a B2B platform in Flask shared between Telcel and Samsung for the logistics management of device activation codes, featuring a request orchestrator and direct customer/incident handling.
- Integrated cloud storage subscriptions into the CRM via API as a new product line.
- Architected the initial phase of a real estate CRM for property sales in Florida, featuring a dynamic catalog hosted on AWS, optimized image rendering, filtering, pagination, and WhatsApp Business API integration.

Backend Developer | Banamex

May 2022 – November 2022 | Mexico City, Mexico

Keywords: Python, ABinitio Migration, Microservices, Unit Testing, RedHat

- Migrated legacy ABinitio processes to Python for billing microservice automation, implementing an event-driven orchestrator with SQL configurations, business-rule partition logic, and a 5-layer validation framework (special characters, record existence, accounts, dates, and database cross-checking).
- Achieved 85% unit testing coverage using mockers, validated within a RedHat environment.
- Spearheaded the process initially as a sole Junior Developer, subsequently training the onboarding internal team and an entire external vendor team on implementing new processes under the same architecture.

Junior Business Analyst | Banamex

October 2021 – May 2022 | Mexico City, Mexico

- Generated user stories and Source-to-Target mapping matrices for data cross-checking and billing workflows, serving as a strategic bridge between business and development teams to rectify discrepancies in data modeling and storage.

PROJECTS

School Cafeteria Point of Sale (POS) System

September 2025 – Present

Keywords: Django, PostgreSQL, Render

- Defined the architecture, relational database schema, and role-based workflows from scratch for a school cafeteria lacking prior infrastructure.
- Engineered core modules including order processing, expense tracking, dynamic menus, an interactive Kanban board, an announcement portal, and transaction history. The system is currently deployed in production and actively utilized.

EDUCATION

Bachelor of Science in Computer Engineering | Instituto Politécnico Nacional (ESIME Culhuacán)

Degree Completed / Certified (Titulado)

Graduated: January 2021 | Mexico
City, Mexico

CERTIFICATIONS

Crash Course on Python – Google

Issued: June 2025
